

Editorial

We bring the first issue of the twelfth volume of the **International Journal of Web Applications** with the below described research.

In the first paper on **“Software implementation of Online assisted Platform for Computer-aided design”** the authors described the software implementation of Online assisted Platform for Computer-aided design in communications (Online-CADCOM) in Cloud environment. The platform used has a multi-tenant Cloud application and the platform and database architecture are discussed as well as platform availability and security.

In the second paper on **“Design for the mobile robots’ position with the application of odometry”** the authors described the design for the mobile robots’ position in various tracks with the application of odometry. The authors have used the Lego Mindstorms robots for practical analysis.

In the last paper on **“Wireless interfaces for Embedded system with intelligent sensors and actuators”** the authors have discussed the new embedded system for the wireless interfaces. These interfaces are widely adapted to link the intelligence-based sensors and actuators.

These papers will have good impact on the future research in web and cloud environment.
