Computer Graphics Algorithm Based on Visualization Teaching Theory-
Fangzheng Wang 137

Optimization of Reconstruction of 2D Medical Images Based on Computer 3D
Reconstruction Technology-
Shuqin Liu, Jinye Peng 142

Cloud-based Government Procurement Information Integration Platform-
P.Y. Wang, J. Shen, W.Q. Guo, C. Zhang, B. Zhang 147

Sina Weibo Incident Monitor and Chinese Disaster Microblogging Classification-
Hua Bai , Xunguo Lin, Bella Robinsion, Robert Power 156

Clustering Research across Tibetan and Chinese Texts-
G. X. Xu, W. Sun, X. P. Peng 162

A Feature Selection Method to Handle Imbalanced Data in Text Classification
-Fengxiang Chang, Jun Guo, Weiran XU, Kejun Yao 169

Do Online Recommendations Matter? – A Multimodal Investigation of Amazon’s Co-Purchase Network-
Hsuanwei Michelle Chen 176

Influence of Information Technology on College Piano Course Teaching Model-
Yuan Qin 185

A Basic Comparative Framework for Evaluation of Digital Identifier Systems-
Hamid Reza Khedmatgozar, Mehdi Alipour-Hafezi 190

Book Review 198

Conference Notification 199

- Fourth International Conference on Future Generation Communication Technologies
(FGCT 2015)

- Tenth International Conference on Digital Information Management
(ICDIM 2015)

Editorial

We are pleased to release the third issue of the thirteenth volume. This issue is marked by the publication of technically enhanced models in information research.

The contents of the papers in the issue are related with computer graphics algorithm, medical images constuction, cloud-based information integration, micorblog classification, Chinese text processing, text classification, online recommendation for e-business, information technology based education and digital identifier systems. The papers contribute to the technical methods mainly and experimentation secondly.

We are confident that these papers attract the future research pieces and will contribute to the future research in digital information processing systems.
