The digital society has been changing our lives and lifestyle tremendously. Most activities aim to promote human well-being, and the digital impact has a significant role. Realizing this value, a conference on Digital Transformation was organized. This collection has 17 selected papers from the conference on Emerging Digital Library Platforms Shaping Digital Transformation and National Data Exchange organized by the Documentation & Research Center in Bangalore in August 2022.

This collection represents some vital areas of potential interest in digital transformation. The contributions include theoretical research, empirical data analysis, digital applications and interdisciplinary research that address the digital impact. Some of the contributions speak on the digital effects and the scope of digital applications.

Copies can be ordered through email or letter
