Editorial

We bring the sixteenth volume of the **International Journal of Information Studies** with the below research papers.

In the first paper, **"Study of Chat GPT Influence on Academic World for Learning and Research Activities",** the authors, P. Raghavaiah and Karnati Srikanth, diagnose the implications of Chat GPT on academic activities and libraries. the chat GPT provides the most relevant documents with sum-up information, which looks like a subject expert or a colleague offers.

In the second paper, **"Implementation Strategies and Sustainability of Repositories in the Autonomous Institutions in West Bengal, Karnataka, Kerala, and Delhi: An Evaluative Study",** the author, *Varsha Singh, Avinash Kumar Singh, K.L. Mahawar, Vishwadeep Kharwar* addresses how autonomous institutions in some regions can maintain their repositories and implementation methods over the long term. For this study, a total of six independent institutions were chosen. They believed that institutions should enhance user satisfaction with repository features such as content accessibility, user interface, file formats, and submission processes.

In the last paper, **"Authorship Patterns in Engineering Education",** the author Yahya Ibrahim Harande examined authorship patterns in Engineering Education literature from 2000 to 2008. The result shows that collaboration activities dominated the literature. It has proved that collaboration connects the research activity of scientists across nations and continents.

We hope that the research published in this issue marks significance and validity.
