Editorial

We bring the second issue of the sixteenth volume of the **International Journal of Information Studies** with the research explained below.

In the opening paper, **"Most Cited Articles in the Field of Data Mining: A Bibliometric Study"**, the authors analyzed the papers on Data mining published from 1995 to 2021. They studied the citation pattern of highly cited papers in the selected field. They found the phrases and keywords that were used in the highly cited papers to examine the impact. The authors claim that the findings assist new researchers in learning from the types of contributions, strategies, and research techniques used in highly-cited articles to write higher-quality studies that are more likely to receive high citations.

In the next paper, "**A View of Information Sharing Pattern through Consortia in India**," the authors delved into the world of library consortiums and their functioning. They provided a detailed discussion on the various consortium models and resources used, offering a practical understanding of this important aspect of library and information science.

In the third paper, "**Enhancing the Skills in the Changing LIS Landscape: A Look at the Digital and Associated Skills of the Professionals,**" the authors highlighted that library professionals have become cybrarians and librarians who provide outstanding services to users at the right time. Currently, for Library and Information Science professionals, it is essential to enrich their knowledge, skill sets, self-motivation, situation handling, problem-solving, service-oriented mindset and a few more. They found some additional skills such as Computer skills, Networking skills, Information retrieval skills, managerial skills, communication skills, preservation skills, etc., to improve their career end.
