Editorial

We are pleased to release the last issue of the eleventh volume of the **Journal of E-Technology** with the below described research/

In the opening paper on "**Social Network Influences on Human Migration**", the authors presented the effect of international emigration of Ecuadorians in literature published over the last three decades. Authors in this paper with the help of a developed theoretical framework from social and human sciences such as economics, sociology, psychology and, communication, presented the bibliographic research so that the research in the work will be a completed one

In the next paper on "**A Study of the Views of the Learners; Understanding of the Postgraduate Course in Agile Project Management for improvement of skills**" the authors viewed that the teaching-learning methods are evolving in combination with new technologies, due to the daily use of the technology where the learners experience a new learning environment. The authors further found that there is a vast literary recreation of the consequences.

In the third paper on "**IoT System for Monitoring Conditions in the Human Environment**", the authors have studied the significance of the environment on human health and his working and living activities requires the constant tracking of the ecosystem changes. The authors proved that the Internet of Things devices represent the ideal means for monitoring parameters that determine the quality of the environment.

In the last paper on "**A Responsive Design and Interactive Platform of Event Management System**", the authors have developed a new application platform, which will help to organize the scientific events. The authors have used the php framework and mySQL database and it is a tool that allows conference organizers to spend more time on the program and significantly less time administering.

We will meet the readers with the new issue in 2021.
