Signal Processing for Efficient Transmission over Network- 47  
V.V.S.N Bharat Kumar, Tripty Singh

An Efficient Algorithm for Automatic Television Broadcast Monitoring- 63  
Arsalaan Ahmed Shaikh, Hammad Qureshi

**Book Review** 75

**Conference Notification** 77

- Sixth International Conference on the Applications of Digital Information and Web Technologies  
(ICADIWT 2015)
  - Fifth International Conference on Innovative Computing Technology  
(INTECH 2015)
- Fourth International Conference on Future Generation Communication Technologies  
(FGCT 2015)

## Editorial

We present the second issue of this volume with the following research.

In the first paper on **Signal Processing for Efficient Transmission over Network**, the authors *Bharat Kumar* and *Tripty Singh* have generated an input signal in wireless communication and modulated it using MC-CDMA. They have used MC-CDMA as it allows multiple users to share the same frequency spectrum simultaneously. To check the fidelity of the transmitted signal, noises are added by the authors because when the signal is generated in the transmitted channel and the signal is affected due to noises.

In the final paper on **“An Efficient Algorithm for Automatic Television Broadcast Monitoring”** the authors *Arsalaan Ahmed Shaikh* and *Hammad Qureshi* proposed a set of audio features which may be used to perform automatic auditing of broadcast content. The experimental results shown that Gabor Filter Bank Feature (GBFE), Mel-frequency Cepstral Coefficient (MFCC) and MPEG7 Audio Flatness Mean are the most suitable audio features for an automated television broadcast monitoring system.

The papers are contributively add knowledge to the domain.
